Performance Diesel Turbo Kits for Cummins, Duramax and Powerstroke Engines

It's not often in life that something delivers the best of both worlds, which is why PowerMax turbo kits are the performance upgrade of choice for light-duty truck haulers and racers alike. PowerMax turbo kits blend Honeywell's O.E. engineering experience with Garrett's record-setting Motorsports heritage to deliver the ultimate combination of performance and longevity for any application.

WORKS HARD. Towing/hauling professionals and enthusiasts benefit from Stage 1 and 2 kits that lower Exhaust Gas Temperatures (EGTs), increase fuel efficiency and deliver more power for passing and hill climbing.

PLAYS HARDER. Stage 3 kits significantly increase intake airflow and are capable of delivering over 500 additional horsepower for high-performance Diesel applications.

PowerMax™ Features:

- Multiple staged kits available to meet your performance needs
- Patented dual ball-bearing cartridge delivers outstanding response and durability at high boost levels
- Water-cooled center section extends turbo longevity
- Provide up to 100% more flow than O.E. turbos
- Matched turbine housings for free flowing exhaust, faster spool up
- Oil inlet fitting features a built in restrictor for worry-free operation
- All components and necessary hardware for installation included

PROVEN PERFORMANCE AND RELIABILITY

"Before using Garrett turbos, our truck never went more than three passes in a row without turbocharger failure. We switched to a GT4202R before the NHRDA World Finals in 2007. The truck's previous best MPH at the 1/8th was 100, hitting 127 in the 1/4 mile. With the Garrett turbo, we improved 1/8 MPH to 105 and crossed the traps at 132.5. The best part though? Six consecutive passes, no turbo damage and the unit is still running strong!"
